Driven Software Engineering student with a focus on creating interactive games and web applications while managing projects from design to deployment in GIS and IoT. Practiced in Python and Java, with hands-on experience using VR tools to build high-quality systems. Passionate about tackling challenging problems through modern development, turning ambitious ideas into practical, user-focused software.

TECHNICAL SKILLS

PROGRAMMING LANGUAGES

•Python, Java, Javascript, C++, Swift, Html, Css, Sql

DEVELOPER TOOLS

•Aws, Git, Mysql, Android Studio, Oculus Meta Quest Frameworks & Libraries Pygame, Unity, Arcgis

TECHNICAL PROJECTS

TETRIS CLONE | PYTHON, PYGAME

- Developed a logic-based Tetris game implementing collision detection, grid-based state management, and line-clearing algorithms
- Managed the game loop to handle real-time user input and piece-rotation physics

ROBOFIT TRAINER / IPALWEBSITE | HTML, CSS, JAVASCRIPT, JAVA, AWS

- Designed and deployed a cloud-based web application and android interface to monitor user fitness analytics
- Integrated backend logic with Java to manage user data and cloud hosting environments

TECHNICAL EXPERIENCE

GIS AND IOT INTERN | CITY OF CORAL GABLES | SEPT 2023 — NOV 2023

- Developed a virtual reality environment simulating the city of Coral Gables using Unity and ArcGis
- Enabled user interaction within the VR Environment, including free-roam exploration via oculus meta quest headsets
- Collaborated with the GIS and IoT department on utilizing immersive technology for city representation

EDUCATION

BACHELOR OF SCIENCE IN INFORMATION SYSTEMS TECHNOLOGY (SOFTWARE ENGINEERING)

- Relevant coursework: data structures, algorithms, software engineering I & II, database design
- Certifications: computer programmer — mobile applications development (android & ios); swift programming
